Address: 19 Avenue des Talipots, Quatre Bornes, Mauritius

SUMMARY

Master's student in Software Architecture and Development at 3iL Ingénieurs – Université de Limoges, delivered at MCCI Business School in Mauritius, with hands-on experience in full-stack development, microservices, and DevSecOps. Skilled in software architecture, backend development, and modern web technologies. Seeking opportunities in software engineering, software architecture, and enterprise application development.

TECHNICAL SKILLS

Software Architecture : UML, Microservices Architecture, Hexagonal Architecture, MVC, Monolythics.

Programming Languages : Java, PHP, Python, Javascript.

Frameworks & Technologies : Spring Boot, Laravel, FastAPI, Next.js, Docker, HTML/CSS

Databases : MySQL, PostgreSQL.

Tools : Git, Github, Github Actions, SonarQube, Snyk, Jira

Methodologies : Agile Scrum, Software Project Management

PROFESSIONAL EXPERIENCE

Freelance Fullstack Developer | June 2026 – August 2026

JKA Mauritius Management Platform

Technologies : Laravel | PHP | HTML | CSS | JavaScript | MariaDB

- Chose Laravel over the client's native-PHP request, building six core modules from scratch: members, licensing, dojos, competitions, seminars, payments.
- Built a CI/CD pipeline (GitHub Actions) with SonarCloud static analysis and Snyk dependency scanning, cutting known vulnerabilities by 80% (50 to 10) via a zero-downtime dependency update.
- Raised automated test coverage from 0% to 60.6% in CI by rebuilding the test environment (disposable database service plus synthetic fixtures).

- Diagnosed and resolved a silent production outage with zero server access, isolating the root cause within 3 hours and shipping a verified fix.
- Designed a bank-reconciliation payment validation workflow, and automated QR-code/ticket generation plus Excel/PDF exports.

Backend Developer Intern | 2024

VatiLab Factory

Technologies: Laravel | PHP | PostgreSQL

- Contributed to the development and maintenance of a marketplace backend.
- Optimized PostgreSQL queries and Laravel performance, reducing API response time by approximately 30%.
- Improved code quality through refactoring, increasing system reliability and reducing production issues.

PROJECTS

UrbanHub - Smart City Architecture (Academic Team Project) | 2026

Technologies: Python | FastAPI | PostgreSQL

GitHub: <https://github.com/fehiZ77/EC03-UrbanHub-ms6>

- Contributed to the architecture of a Smart City platform based on Microservices and Event-Driven Architecture (EDA).
- Developed microservices for real-time traffic monitoring and IoT event processing.
- Designed interactions between IoT sensors, event brokers, APIs, processing services, and monitoring dashboards.

EDUCATION

Master's Degree in Software Architecture and Development | 2025 – Present

3iL Ingénieurs – Université de Limoges | MCCI Business School - Ebène, Mauritius

Bachelor's Degree in Web Development and Design | 2020 – 2024

IT University – Andoharanofotsy, Madagascar

Scientific Baccalaureate | 2018

ESCA – Antanimena, Madagascar

LANGUAGES

French - Fluent (DELF B2) | **English** - Upper-Intermediate (IELTS 5.5) | **Malagasy** - Native

SOFT SKILLS

Teamwork | Collaboration | Problem Solving | Adaptability | Continuous Learning
